Active Ingredients

- Pymetrozine 50%

BESTILE™ 50 WDG is the solution for controlling both nymphs and adult aphids in various crops. The unique mode of action of the active ingredient Pymetrozine offers locally systemic and translaminar activity that stops feeding within a few hours of the application. BESTILE™ 50 WDG is soft on beneficial insects and delivers up to two weeks of residual activity.

Product Benefits:

- Controls multiple stages of aphids
- Stops feeding within a few hours and provides up to two weeks of residual
- Prevents spread of transmissible plant viruses
- Minimal impact on beneficial insects
