

EVOLUTION[®] enhances native soil microbial activity and improves CEC and water holding capacity to improve the soil health and performance for your crop. This results in plant and root stimulation effects that lead to more root growth, finer root hairs, increased root exudates, and improved mineralization of carbon and nutrients in the root zone. EVOLUTION's positive effects have been proven by replicated science and in field results for over 35 years.

FEATURES

- Enhance applied nutrient availability and uptake.
- Contains extracted carbon and a carbohydrate package for nutrient chelation and soil amendment properties
- Sound, efficient formulation compatible with many fertilizers

RATES

0.5-4 gal/A banded or broadcast

ANALYSIS

0-0-4

GROWER BENEFITS

- Enhanced existing nutrient mineralization and nutrient solubility
- Designed to promote beneficial microbes to drive soil process that make nutrition move available to the growing crop
- Sound, efficient, flexible formulation
