

Re-NForce[®] K is a unique blend of slow release nitrogen and potassium thiosulfate designed to be flexible across many different applications to suit the fundamental needs of many crops and conditions. Re-NForce K is ideal for situations that require sulfur and potassium at critical timings. Re-NForce K is a dynamic solution for growers' potassium and sulfur needs.

FEATURES

- Built with slow release nitrogen (SRN) to enhance uptake of nutrients at the root or leaf tissue
- High analysis of potassium and sulfur for a flexible solution for major nutrient needs at any time of the season
- Sound formulation is chlorine free for safety in many applications
- Compatible with many fertilizers, and pesticides for ultimately flexibility across many application methods and timings

ANALYSIS

5-0-20 13% Sulfur

GROWER BENEFITS

- Increased absorption of potassium and nitrogen compared to many locatoin in many applications
- Potassium supports translocation of nutrients within the plant and aids in late season plant performance
- Highly available sulfur helps with nitrogen assimilation in many crops and supplements a nutrient that is increasingly deficient in many crops

RATES

1-4 qt/A for most crops and applications
