

ReaX^{PLUS} IRON

REAX PLUSTM IRON is a liquid iron (Fe) product designed for at-planting and drip, drench, and inline applications with foliar flexibility. Enhanced with unique C² soil health and plant performance technology and now fortified with Biocatalyst Technology. **ReaX Plus Iron** is designed to improve nutrient availability to meet the yield and quality goals of growers in a variety of growing conditions year after year.

PRODUCT FEATURES

- Iron reacted with C² Technology to maximize availability and uptake
- Carbon-based Biocatalyst Technology improves nutrient uptake and crop tolerance to abiotic stress
- Promotes healthy growth through optimal nutrition and increased crop vigor
- Formulation designed for soil and foliar applications

ANALYSIS

- 4-0-0 4.5% Fe with C² Technology

IRON AT-A-GLANCE

- Iron serves as an activator for biochemical processes such as protein synthesis and forming of respiratory enzyme systems
- Iron is an important part of the nitrogenase enzyme, which affects nitrogen (N) fixation in N-fixing plants
- Provides bioavailable iron across a broad range of soil environments to aid in important metabolic processes like protein synthesis and lignin formation

GROWER BENEFITS

- Address iron chlorosis issues associated with poor availability
- Dual-source iron extends release curve and uptake
- Application flexibility fits many programs

RATES

- Soil: 1-3 gal/A
- Foliar: 1-4 qts/A
- Fertigation: 1-5 gal/A
