Active Ingredients

- contains stabilized silica technology (SST)

A highly advanced form of calcium designed for enhanced foliar uptake. This unique form of calcium has a lower pH and higher foliar availability than traditional forms of calcium. The addition of the proprietary SST silica provides 2% silica for enhanced physical toughness and resistance to environmental stress as well as enhanced tank mix compatibility.

Product Benefits:

- Increased plant uptake
- Increased compatibility for greater tank mix flexibility
- Stable in a spray solution at a pH of 3 to 12, versus other silica products that are only stable at a pH of 7 to 11
