Here's a better way for K

Potassium when your crops need it

Get Growing with C² Technology

Whether it's at-planting or foliar applications, ReaX K delivers highly soluble and readily available forms of potassium when your plants need it. Armed with patented C² Technology from Loveland Products, ReaX K helps mobilize potassium and other nutrients to key growing areas of each plant to help almost any crop reach its maximum yield potential.

Grower Benefits:

- C² formulation maximizes nutrient availability and mobility to drive yield and quality by optimizing membrane penetration for fast uptake
- Contains 25% readily available potassium to supports late-season crop development
- Enhances buffering capacity to moderate the effect of salts in a foliar fertility blend
- Flexible formulation allows for at-planting, banded in-furrow or foliar applications

What is C² Technology?

C² is a proprietary technology consisting of extracted Carbon and Carbohydrate reacted with nutrients for improved Soil Health and Plant Performance.

Carbon: Increases nutrient availability by fostering growth of beneficial soil microbes and positively impacting soil attributes creating better holding capacity for nutrients and water

Carbohydrate: Improves nutrient uptake and availability in both soil and foliar applications
